Red Hat Enterprise Linux 8.5 - 8.6 Installation Guide

Red Hat Enterprise Linux 8.5 - 8.6 Installation

RHEL Lightspeed is a new Red Hat Enterprise Linux (RHEL) distribution designed for high-performance computing (HPC) workloads. It is based on RHEL 8.5 and includes a variety of optimizations and features that make it ideal for HPC environments. This guide provides information on how to install RHEL Lightspeed on your system.

For more information, see:

- **System Requirements:** RHEL Lightspeed requires a 64-bit processor and a minimum of 16 GB of RAM. It also requires a 64-bit operating system and a 64-bit kernel. For more information, see the [System Requirements](#) page.
- **RHEL Lightspeed Architecture:** RHEL Lightspeed is based on RHEL 8.5 and includes a variety of optimizations and features that make it ideal for HPC environments. For more information, see the [RHEL Lightspeed Architecture](#) page.
- **Installation:** RHEL Lightspeed can be installed using the `rpm` command. For more information, see the [Installation](#) page.
- **AMD and Intel 64-bit (x86_64)**
- **ARM64 (aarch64)**
- **IBM Z (s390x)**
- **IBM POWER (ppc64)**
- **Installation:** RHEL Lightspeed can be installed using the `pip install command-line-assistant` command. For more information, see the [Installation](#) page.
- **Red Hat:** RHEL Lightspeed is a Red Hat product. For more information, see the [Red Hat](#) page.
- **Red Hat Enterprise Linux:** RHEL Lightspeed is a Red Hat Enterprise Linux distribution. For more information, see the [Red Hat Enterprise Linux](#) page.

Red Hat Enterprise Linux 8.5 - 8.6 Installation

For more information, see the [Red Hat Enterprise Linux 8.5 - 8.6 Installation Guide](#).
